---

Experience:

Lion Express (2020): an online banking service system that allows the user to manage their accounts through a website and mobile application.

Backend programmer in this project

TTS - TorTor Transport Service (2020): an online management system that allows easy supervision on arrived and on hold packages and delivery drivers both in and off road.

Led the development of this project

FishCare IOT (2021): a website and mobile prototype that can monitor the temperature and humidity of the fish owner's aquarium.

Supporting Member in this project

BitMiner (2021): an online dashboard that tracks registered WEMOS microcontrollers status whether it is mining or not as well as its temperature, currency mined, etc.
Led the development in this project

AWET - Alternative Web-based Education Tool (2021): an online tool made to supplement the teaching of PLF (Program Logic Formulation) related courses online. Offers an LMS experience for the students along with canvas environment for both concepts and a level of management for educators.
Led the development in this project
